

FIXED NETWORK OPERATOR

Voxbone helps Bayan Telecommunications connect Filipinos around the world

EXECUTIVE SUMMARY

Bayan Telecommunications is a leading alternative telecommunications service provider in the Philippines that provides wireless, wireline and data services to residential and business markets. Together with Voxbone, Bayan introduced a value-added service for its residential telephony customers, known as Bayan FamilyTies. The service allocates a local phone number from a foreign country to a subscriber's landline in the Philippines. The service, which is available from 19 countries worldwide, strengthens the ties within the Filipino community worldwide.

THE CHALLENGE

The emerging Filipino market is changing rapidly, especially when it comes to telecommunications, data and entertainment. Consumers and enterprises long for the latest technologies, solutions and devices. Bayan, which serves more than 25 million people across the archipelago, was determined to meet these challenges and address customer needs.

About 11 percent of Filipinos live outside the Philippines. As a result, many other countries have substantial Filipino communities. To help Filipinos abroad stay in touch with friends and family, Bayan wanted to provide its wireline subscribers with a service that would make communication between the Philippines and other countries easier and more affordable. However, dealing with different operators and regulators in each country to develop such a service presented a real challenge that would have delayed introduction of a new service by months, if not years. Furthermore, Bayan would have needed to build an international virtual private network to transport calls between countries.

THE SOLUTION

In January 2007, Bayan teamed with Voxbone to obtain local telephone numbers from the countries with the largest Filipino communities. These numbers formed the cornerstone of its new Bayan FamilyTies service.

Voxbone's VoxDID service enabled Bayan to extend the international reach of its telephone network rapidly and with limited costs. The service provides geographical and national phone numbers from more than 60 countries and 9,000 cities for direct inward dialing (DID). Calls to these telephone numbers are converted from PSTN to VoIP and are routed to anywhere in the world over Voxbone's intercontinental private IP backbone. In a growing number of countries, existing telephone numbers can be ported to the VoxDID service. Numbers can be ordered and configured in real time via Voxbone's Webbased administration portal (VoxCOMMAND) or applications programming interface (VoxAPI).

“Voxbone is the only company able to provide phone numbers from anywhere in the world with real-time provisioning and no per-minute charges for transport to the Philippines.”

Neil Macalino, Head, Bayan Business International, Bayan Telecommunications Inc.

Built on VoxDID, Bayan FamilyTies provides a unique service for Filipino expatriots around the world. Subscribers are assigned a personal local phone number from the country in which they live. This number is linked to the fixed phone number of a contact in the Philippines. This Bayan FamilyTies phone number enables customers to avoid long-distance charges and allows unlimited calling to a Bayan fixed or wireless phone from abroad at local call rates.

The expatriot subscribers choose the beneficiaries in the Philippines, each of whom receives a free Bayan fixed phone, including unlimited local calls as part of the bundle.

HOW IT WORKS

A Filipino staying in the United States can sign up with Bayan FamilyTies service and get a Bayan fixed phone and phone number for a contact in the Philippines. In addition to the phone, the subscriber is assigned a local U.S. phone number in his or her U.S. area code. Calls to the U.S. local number are processed by Voxbone in the United States and converted to VoIP. A call is then transported over Voxbone's private global IP backbone and delivered to the Banyan voice network in the Philippines. Bayan identifies the U.S. telephone number and delivers the call to the associated Bayan landline phone. The U.S.-based Bayan FamilyTies subscriber only pays local call charges for an international call to the Philippines.

SUCCESS STORY

With the introduction of Bayan FamilyTies in 2007, Bayan became a pioneer in innovative VoIP services. Today the Bayan FamilyTies service is available in the 19 countries with the largest Filipino communities in North America, Europe and the Asia Pacific region. Over the years, the service has become popular among Filipinos. As a result of this success and the longstanding strong relationship between Bayan and Voxbone, both companies have collaborated to develop innovative VoIP services for the business market.

“*With Voxbone, we developed a globally available service that offers great value to our customers in just a couple of months.*”

Helen Manalili, FamilyTies Product Manager,
Bayan Telecommunications Inc.

Number sourcing, local interconnects, carrier relations management and regulatory compliance are handled entirely by Voxbone, ensuring rapid deployment with limited costs and limited risks. The full-featured Web portal enabled Bayan to set up the link with Voxbone quickly, and VoxAPI allows Bayan to create and manage Bayan FamilyTies accounts in real time.

ABOUT VOXBONE

We are Voxbone: the market leader in providing virtual local phone numbers (often referred to as DID numbers). Our services make it simple for cloud communications providers, international carriers and enterprise contact centers to extend the reach of their voice networks quickly, globally, and economically. We deliver high-quality DID numbers from more than 60 countries and over 9,000 cities around the world. Our geographic, mobile and toll-free numbers can be ordered in real-time via our web portal or an API. We are the only operator of our kind, with our own number ranges, telecommunications licenses and a global private VoIP backbone. Our happy customers include: Telefónica, Deutsche Telekom, Orange Business Services, NTT Communications, 8x8 Inc., InContact, Serenova and Skype. Want to know more? Come and check out our website at www.voxbone.com, read [our blog](#) or follow us on [LinkedIn](#), [Twitter](#) or [Facebook](#).
